The hour on storing data isn't quite what you might expect as the Arduino has three types of memory and there are ways of using each type that need to be explained. The biggest problem with this introduction to C is that it misses out a lot of the lower level programming that you have to do with this sort of hardware.

2) Write a program in C that fork() 2 child but only wait for the 1 child to exit, and then the program will output the exit status of the waited child. 3) Write a file in C that will fork 2 child. In the child, users are able to enter strings to write into the pipe. Parent program then will output the strings entered by users on both child.
