Project Management for Construction: Construction Planning

Construction management is the overall planning, coordination, and control of a construction process from the start to the end. The objectives of project management are to produce a project that meets client requirements on budget and schedule, and at acceptable risk, quality, and safety. Project managers often earn their positions by proof of efficient management on similar value projects.

What is Construction Management?

An Introduction to Construction Project management. Construction Management is both an art and a science, and is something that is usually quite hard to do. It is hard because one has to look at a broad range of variables, and try and guess what effect each variable will have on a construction project. For example, a construction manager in the middle of a project will have to take into account the following:
